ALERT Security and Investigation Agency, Inc. to Showcase the Brijot Whole Body Imager

The Product Demonstration and Presentation Event is Sponsored and Hosted by the U.S. Commercial Service Philippines

MAKATI CITY, Philippines - November 26th, 2008 - Terrorist activities and attacks continue to exist as a danger to the safety and security of people worldwide. A solution is needed that safely screens people for multiple threats quickly and efficiently. In response to this growing need ALERT Security and Investigation Agency, Inc., a provider of security and investigation services, is pleased to announce it has been appointed to promote, sell, service, and market the Brijot Imaging System's full-range of passive millimeter wave whole body imager in the Philippines.

The Brijot technology product launch, sponsored by the U.S. Commercial Service of the U.S. Embassy, will be on December 4th, 2008. The U.S. Commercial Service office in Makati City will host the event inside the ABC conference room from 9 a.m. - 12 p.m. Attendees can expect to see a live presentation and product demonstration of the Brijot whole body imager that instantly detects concealed weapons, explosives, and other contraband hidden beneath an individual's clothing.

Manuel D. Dasig, Sr., President and General Manager "We are thrilled about the launch of the Brijot product line, it is a much needed solution in the Filipino marketplace. I see many of our clients utilizing the whole body imager and look for it to be the driving force in our expansion in providing the best available people screening equipment. This event gives us a great opportunity to have the manufacturer's support in demonstrating the wide variety of applications that such a robust solution offers."

"It is invigorating to know the system is receiving global awareness and I am honored to discuss the positive results of our current deployments," says Brijot's Account Representative, Jared Laskey. "As it stands today, walk through metal detectors and handheld metal detectors are limited in their capability to efficiently screen people for a wide-variety of threat items and contraband - Brijot fills this void. Our technology effectively screens individuals for concealed items without infringing on ones personal privacy and doesn't pose any health risks. We are very excited to partner with ALERT who bring over twenty years of experience in the Filipino market" added Laskey.

About the Brijot Passive Millimeter Wave Whole Body Imager

The system uses advanced passive millimeter wave imaging technology to provide a rapid and discrete method for detecting an array of concealed objects such as currency, narcotics, liquids, gels, explosives, weapons, contraband or other determined security threats hidden beneath clothing. It includes an integrated full-motion video camera, on-board computer and a sophisticated, intelligent video detection engine. Key features of the passive millimeter wave technology utilized in the system is that it safely and passively detects the naturally occurring electromagnetic energy coming from a subject and does not reveal any anatomical details.
