## **Brijot Imaging Systems Selected by Best Buy to Provide Millimeter Wave Object Detection and People Screening System**

*Ground Breaking Millimeter Wave Screening Technology Yields Speed, Accuracy and Process Advantages to Best Buy's Associate Screening Process.*

ORLANDO, Fla --(BUSINESS WIRE)-- Brijot Imaging Systems announced today that it has been selected by Best Buy Canada Ltd. to deliver the Brijot BIS-WDS<sup>®</sup> GEN 2 Object Detection and People Screening system to be incorporated into Best Buy's integrated layered security strategy for associate screening.

"Best Buy has evaluated the GEN 2 system and after a detailed testing period, a comprehensive return on investment and benefit analysis, has made a decision of incorporating this innovative technology into its layered security strategy for associate screening and loss prevention measures," said Brendan Alexander, director of loss prevention at Best Buy Canada Ltd. "As a retailer which has relied on more traditional security measures such as metal detectors for the past 20 years, we have evolved our screening process by incorporating less intrusive, faster and more accurate technology measures as those offered by the Brijot system."

"It's apparent that Best Buy considers its associates a top priority and providing a safe and secure workplace coupled with a screening process that is polite and non intrusive is critical to their management objectives," said Mitchel J. Laskey, president and chief executive officer at Brijot.

The Brijot system will detect concealed threats sooner, minimize loss prevention and give Best Buy Canada Ltd the ability to virtually screen individuals in real-time. Deploying the GEN 2 as a loss prevention application positively impacts operational screening processes and yields overall management efficiencies.
