**HRL Laboratories, Brijot Imaging Systems in Joint Plan
to Enable Lower-Cost Manufacturing of Object Detection Screening System**

LOS ANGELES, March 27, 2007—HRL Laboratories, LLC and Brijot Imaging Systems, Inc., have announced a joint development plan to enhance the Brijot BIS-WDS[®] millimeter wave imaging system for detecting concealed objects. The Brijot BIS-WDS[®] surveillance system features full-motion, real-time millimeter wave capabilities for detecting hidden non-metallic weapons, explosives, contraband, and stolen electronics.

“Brijot and HRL are designing a module as a plug-in to the Brijot system to enable automated lower- cost, higher-volume manufacturing for the BIS-WDS[®] GEN 2 and for future generations of the object detection and people screening system,” Dr. Matt Ganz, president and chief executive officer of HRL, said.

Added Mitchel J. Laskey, president and chief executive officer at Brijot, “HRL shares Brijot’s strong vision for optimal system detection to impact the security challenges in high threat environments. We believe our customers at airports and security check points, for example, will be as excited as we are about this product. The next-generation system will detect concealed threats more accurately, minimize losses through theft, and virtually pat down and screen individuals in real-time.”

In the project’s first phase, HRL and Brijot will co-design and fabricate a module that amplifies and detects the millimeter wave radiation, making up a single pixel of what corresponds to the "film" in this new type of system. The amplification and detection are made possible by proprietary techniques that HRL has pioneered for more than a decade. This will greatly reduce the cost of the Brijot BIS-WDS[®] millimeter wave imaging system.

HRL Laboratories, LLC is a corporate R&D laboratory owned by Boeing and General Motors. HRL provides R&D services for its LLC Members, for the U.S. government, and for other commercial entities. Brijot Imaging Systems, Inc., with corporate and training offices in Orlando, Florida, designs, manufactures, and sells the BIS-WDS[®] GEN 2 System. Brijot focuses on meeting security challenges in high threat environments, and began full-scale manufacture and distribution of units to customers across the globe in 2006.
