## Brijot Imaging Systems Selected to Demonstrate SafeScreen™ in Asia Pacific

*Invitation to Participate at Narita International Airport Anti-Terrorism Trial*

ORLANDO, Fla.--(BUSINESS WIRE)--Brijot Imaging Systems, Inc., an industry leader in security technology, announced today that it will demonstrate its passive millimeter wave security checkpoint screening system in Japan.

At a trial sponsored by Japan's Ministry of Land, Infrastructure, Transport and Tourism, Brijot will highlight its unique technology at Narita International Airport from August 2-6.

"We're excited about this invitation from Japan because it shows Brijot's reach into the Asia Pacific and is another milestone in the company's expansion in the international market," said Brijot CEO Mitchel Laskey.

Brijot has established itself as an industry leader with its patented GEN 2 technology, which uses passive millimeter wave technology to detect a broad range of concealed objects, such as liquids, explosives, weapons, drugs or cash. Passive millimeter wave technology performs complete body scanning at airport checkpoints without emitting any radiation or energy, making the systems safe for travelers. Brijot SafeScreen™ is deemed safe for children, expectant mothers and individuals with health conditions.

Additionally, Brijot's technology also protects personal privacy, as no anatomical details are revealed. Rather than taking a "picture" of the traveler, Brijot SafeScreen™ identifies concealed objects by detecting the temperature differential of the body and the concealed object.

Brijot SafeScreen™ was specifically designed to address the infrastructure and operational challenges many airports and other facilities face in incorporating large technological equipment into limited space – equipment that typically has slower throughput and a larger footprint and power requirements. Brijot SafeScreen™ is highly compact and can be coupled with existing passenger screening solutions for added layers of security to enhance screening capabilities and throughput.

### About Brijot

Brijot is the global leader in providing non-invasive full body imaging systems for the detection of concealed objects without compromising privacy or safety. Our patented systems, built on passive millimeter wave technology, provide proven security and loss prevention solutions to governments and businesses worldwide.
